Note that the Exchequer openeth eight days before any Term begins, except Trinity Term, in which it openeth onely four days before.

On theſe days following the Judges ſit not at *Weſtminſter*.

{Hillary / Eaſter / Trinity / Michael} Term, or {Candlemas / Aſcenſion / Midſummer / Allhallow} Day

A Description of the Four Quarters of the Year.

And first of Winter.

Sol in ♑, ♒, ♓.

WInter Quarter (after the Astronomers account) began the Eleventh of *December*, 1670, at 48 m. past 10 a clock in the morning and continues till the 10 of *March* this year 1671. So that alwayes the first part of the Astronomical Winter is in one Politick year, and the latter end thereof is in the other; at which time was the shortest day of the year, by reason of the Suns greatest declination from the Equinoctial Line.

This Season of its own disposition, is known to be cold and moist, contrary to the quality of Summer; and in this quarter, the inward parts of Man are very hot, and being healthful, may receive plenty of food, because natural heat is now comforted, and is gone inward, and there increased, and maketh digestion the better.

How the Weather will be therein disposed, is noted for each day throughout the Quarter.

The Sicknesses whereunto this Quarter is most enclined are Rhumes, Gouts, Pushes, Sore-eys, Melancholy, Coughs Catharrs, Sciaticaes, Falling-sickness, diseases proceeding of Rottenness and corrupt Humors, with divers kind of Infirmities incident among women.

Of the ſecond Quarter of the Year, called

The Spring.

Sol in ♈, ♉, ♊.

THe Spring time (being the moſt pleaſant and wholſome Seaſon of the four) taketh its beginning on Fryday the Tenth of *March*, at 52 m paſt 10 of the clock before noon, when the Sun entreth into the firſt minute of the Equinoctial point *Aries*, making the dayes and nights of equal length, which quarter endeth the 11. of *June*, when the Sun entreth into *Cancer*.

This Seaſon is naturally hot and moiſt, and is of the Sanguine complexion, being the moſt temperate and healthful time of the year, and is therefore accounted the fitteſt time to eaſe diſeaſed Bodies in, and to reſtore health again, in thoſe in whom formerly it hath been decayed by any kinde of evacuation.

The particular condition thereof, may be ſeen in the daily diſpoſition of the Seaſon.

The infirmities of this Quarter are Melancholy, Madneſs, The Falling-ſickneſs, Bleeding at the Noſe, Hoarſneſs, Coughs, Itch, Scales, many Ulcers and ſmal Apoſtumes, the Gout and Pain in the Joynts, Pluriſies, Dropſies, peſtilent Agues, Shortneſs

Shortneſs of Breath, Faintings, Pain in the Head, Eyes, and ſtomack, rotten Feavers, and other ſtrange Diſeaſes.

Of the third Quarter of the Year, called Summer.

Sol in ♎, ♏, ♐.

SUmmer (accounted the third part of the Year Aſtronomical) taketh always its beginning at the time of the Suns entrance into the firſt min. of the Solſtitial ſigne *Cancer*, which is this year on Whitſunday the Eleventh of *June*, at 1 a clock and 38 min. in the afternoon, at which time he makes his greateſt declination from the Equinoctial towards the North, and cauſeth the longeſt day and ſhorteſt night in the year; and ſo Summer holdeth on till the thirteenth of *September* following.

In this Quarter the Stomach cannot digeſt ſuch hard meats as it will in the Winter ſeaſon for that natural heat is now diſtributed into the exterior parts, and man is not now ſo hot within as in winter.

As for the diſpoſition of the Weather, you may ſee in the daily inclination.

The Sickneſſes at this time are divers, as burning Agues, Pluriſies, Frenſies, hot Apoſtumes, divers Pains in the Head, ſundry Inflammations, and new Infirmities proceeding eſpecially of

hot cholerick humors, wherewith many will be sore molested.

Of the fourth Quarter of the Year called Autumn or fall of the Leaf.

Sol in ♎, ♏, ♐.

AUtumn or Harvest (being the Fourth and last Quarter of the Year) beginneth upon Wednesday the 13 of *September* at 4. a clock and 48 min. in the morning, the Sun then making his entrance into the first minute of the second Equinoctial Sign *Libra*, working the same effect that he did at his entring into *Aries*, that is, Making the days and nights of equal length, he rising at six in the morning, and setting at six at night; and this Quarter doth last until the eleventh of *December* following.

The quality of this Season is naturally cold and dry, yet by reason of its mutability, it is the most unwholsome; by means whereof, it is more subject to sicknes then any other: For the dregs of all Diseases of the former parts of the Year, will now burst forth and be seen.

How the Air is like to be inclined all Harvest, may be seen in the daily disposition of the Season.

The Diseases of this Quarter are like to be many and dangerous, as Black-Jaundies, Megrims, the Falling sickness, Opilations in the Spleen, difficulty of Breathing, Convulsions, Dropsies, Sciaticaes,

caes, Biles, Tooth-ach, and many more. *From which Good Lord deliver us.*

Of the Eclipſes.

THere will happen two great and total Eclipſes of the Moon this preſent year whereof we in *England*, (if the air be clear) may behold the greater part of the laſt Eclipſe.

The firſt great Eclipſe of the Moon happens upon the 15 of *March*, which will be viſible to our Antipodes and Perœcis, as alſo in *Nova Guinea*, *Inſulis Salomonis*, *De los Tuberones*, in *Mare Delzur*, the Kingdom of *Quivira*, *Straights* of *Anian*, *California*, *China*, *India extra Gangem*, *&c.* To whom the Moon will appear all darkned for almoſt two hours together, to their amazement.

The other Eclipſe of the Moon is total, and almoſt Central, which will in part be viſible in *England* on Friday the eight of *September* in the evening, (if Clouds hinder not) as followeth.

	h.	m.	
The beginning	4	51	In the evening, according to *A.J.V.W.*
All darkned at	5	50	
The middle	6	41	
Recovering light at	7	31	
The end	8	30	
Dig. Eclipſed	20	9	

Although the beginning of this Eclipſe cannot be ſeen of us, yet, if the Air be cleer, we may ſee both the middle and end thereof, the Moon being in the Eaſt.

Here followeth certain Phyſical Verſes, with a Deſcription how the Planets are placed in the Heavens, either before or after the Sun, whereby you may perceive how they keep their motions, day and night. To which is annexed the New, Full, and Quarters of the Moon, with the daily diſpoſition of the Weather; alſo ſhort Rules for Husbandry for every Moneth throughout the Year.

Of January.

If thou be ſick, and help wouldſt have,
The counſel of the Learned crave.
If thou haſt Health, to keep thee ſo,
Fly Idleneſs as deadly fo.
